<b>Data Description</b>	Food Balance Sheet presents a comprehensive picture of the pattern of a Myanmar's food supply during 2011-2016. Our food balance sheet shows for each food item which reflects primary commodity, the sources of supply and its utilization. The total quantity of foodstuffs produced in Myanmar was added to the total quantity imported which gives the supply available during that period. On the utilization side, we can distinguish between the quantities exported, feed to livestock, used for seed, put to manufacture for food use and non- food uses, losses during storage and transportation, and food supplies available for human consumption. The per capita supply of each such food item available for human consumption is then obtained by dividing the respective quantity by the related data on the population during that period. Data on per capita food supplies are expressed in terms of quantity and (by applying appropriate food composition factors for all primary and derived processed products) also in terms of caloric value and protein and fat content.

---

**Statistical Concepts and Definitions**

Myanmar Food Balance Sheets(FBS) are started compiling for the first time in 2017, mainly with country - level data on the production and trade of food commodities. Using these data and the available information on seed rates, waste rates , estimated stock changes and types of utilization ( Seed, Feed, Food, Processing and Other Utilization), a supply/utilization account was prepared for each commodity in weight terms. The food component of the commodity account, which is usually derived as a balancing item, refers to the total amount of the commodity available for human consumption during the year. Besides commodity-by-commodity information, the MM FBS also provide total food availability estimates by aggregating the food component of all available commodities including fishery products. From these values and the available population estimates, the per person dietary energy and protein and fat supplies are derived and expressed on a daily basis. In the FBS production data refer only to primary products while data for all other elements also including processed products derived there from, expressed in primary commodity equivalent.

**Time Coverage**

2011-2016

**Unit of Measure**

Domestic Supply Quantity ( Production, Import, Stock Change, Export), Domestic Utilization Quantity( Feed, Seed, Processed, Waste, Other Utili, Food are expressed in ['000 MT]. Food Supply Quantity [kg/capita/year],Calories Supply Quantity[kg/capita/day], Protein Supply Quantity and Fat Supply Quantity are expressed in [g/capita/day],Total Population is expressed both sexes in ['000].
